THE BALNEO TUB

How to use

— BEFORE GETTING IN —

1. Take a quick shower first. Oils, sunscreen and makeup residue end up in the jets and damage the pump. A quick rinse is enough.
2. Check that the drain plug is closed before filling, then turn on the taps.

— THE TAPS — 3 CONTROLS —

Middle handle — switches the water outlet between the handheld shower and the cascade that fills the bathtub. Right handle — sets the water temperature. Above 37°C (99°F), a safety stop blocks the rotation: press the small safety button on the handle while turning to go hotter.
It takes about 30 minutes for the bathtub to fill.

— THE MASSAGE PANEL — 3 BUTTONS —

BUBBLES
28 air jets – enveloping

JETS
12 hydrojets – toning

LIGHT
Chromotherapy

Once you are sitting in the water, press the button you want — each function turns on and off independently. You can run the jets and bubbles at the same time for a full massage. Chromotherapy cycles through colours automatically, no setting needed. The jets target the back and shoulders; the bubbles envelop the whole body in a soft flow; the light creates a calming atmosphere.

⚠ **Important for the jets :** Before pressing the Jets button, the water level must be at least 5 cm (2") above the highest jet. Running the jets without enough water draws air into the pump and damages it. Any repair will be charged.

— THE HEATER BUTTON —

Next to the massage panel you'll find a round button in grey aluminium.
It activates the water heater, which automatically restarts a heating cycle as soon as the temperature starts to drop. The water stays warm without any further action from you.
Our love-room tip : Enjoy a first 30-minute session, switch on the heater on your way out, and come back several hours later — the water will still be at perfect temperature. Ideal for spacing out massage, dinner, then a second session without having to drain and refill.

— DURING THE BATH —

Recommended duration: **20 to 30 minutes per session**. Beyond that, prolonged heat may cause fatigue or dizziness. Balneotherapy is dehydrating — drink water before and after. If you feel any discomfort (dizziness, nausea, palpitations), step out immediately.

⚠ **Contraindications :** Pregnancy, heart problems or high blood pressure, significant alcohol consumption, fever. If in doubt, consult your doctor before use.

— AFTER THE BATH —

When leaving, turn off any active functions by pressing the buttons again, open the drain, and let the bathtub run its automatic ozone disinfection and hot-air drying cycle on its own (a soft humming sound for a few minutes is normal). Rinse the walls with the handheld shower to avoid water marks.

⚠ **NEVER add to the water :** Bubble bath, bath salts, foam, essential oils. These products will destroy the pumps. Shampoo and shower gel are fine.
